**DETAILED ACTION**

***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1, drawn to a system for determining vasculature specifications, and defined by unclassifiable subject matter.
- II. Claims 2-5, drawn to a method for determining optimum vasculature specifications, and defined by unclassifiable subject matter.
- III. Claims 6, 7 and 10-14, drawn to a bioreactor for maintaining cells, classified in class 435, subclass 297.4.
- IV. Claims 8 and 9, drawn to a method of treating a patient, classified in class 435, subclass 29.

Inventions of Group II and Group I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the method could be completed without the aid of an automated system comprising input means and recognition means. The model of the method could simply be created and evaluated by hand. Furthermore, the method does not require a visualization means for visualizing data trends.

Inventions of Group IV and Group III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus could be used to culture essentially any cell type, and is not restricted to practices that involve the treatment of a patient. The apparatus does not require the circulation of plasma from a patient.

Inventions of Groups I and II and inventions of Groups III and IV are directed to related processes and apparatuses. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed do not overlap in scope because Groups I and II are drawn to the fabrication of textile vasculatures, whereas Groups III and IV are drawn to the use of bioreactors to culture cells. Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
